FEDERAL COMMUNICATIONS COMMISSION  
OFFICE OF THE SECRETARY

FCC MAIL ROOM

Dear Gentlemen:

92-235

The Federal Communications Commission has proposed regulation changes that would result in radio control hobbyists losing **over half** of our radio frequency channels. The FCC has proposed to allocate many frequencies in the 72-76MHz band which are very, very close to the same channels that we use for R/C purposes. The end result would be that these channels would become **unusable** for R/C purposes. We would lose over half of them!

I strongly oppose the regulations contained in PR Docket 92-235 which will make our hobby unsafe and much less enjoyable. The few channels assigned to us are all ready plagued by errant door openers and many, many other high frequency devices which have wandered off the bandwidths (which even now are very, very narrow) to which they are assigned.

In addition to the obvious safety factor there are millions of hobbyists who have a very substantial financial stake in this pastime. Why is the FCC attempting to jeopardize our investment now? Allowing other mobile users to operate in the same band will bring chaos to current and future users alike!

I strongly oppose the new regulations and urge you to do the same.

Sincerely,
